# 1 Introduction

Beamer is an awesome way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that is now overused and can be a little cluttered, and the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of **metropolis** is to provide a simple, modern Beamer theme suitable for anyone to use. It tries to minimize noise and maximize space for content; the

only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

By default, **metropolis** uses Fira Sans, a gorgeous typeface commissioned by Mozilla and designed by Carrois. For best results, you will need the Fira typeface installed and use XeLATEX to typeset your slides. However, **metropolis** can also be used with other typefaces and LATEX build systems.

metropolis's codebase is maintained on GitHub. If you have issues, find mistakes in the manual or want to help make the theme even better, please get in touch there. The full list of contributors already contains over a dozen names!

# 2 Getting Started

# 2.1 Installing from GitHub

Installing metropolis, like any Beamer theme, involves four easy steps:

Download the source with a git clone of the metropolis repository or as a zip archive of the latest development version.

Compile the style files by running make sty inside the downloaded directory. (Or run LATEX directly on source/metropolistheme.ins.)

Move the resulting \*.sty files to the folder containing your presentation. To use **metropolis** with many presentations, run make install or move the \*.sty files to a folder in your  $T_FX$  path instead.

Use the theme for your presentation by declaring \usetheme{m} in the preamble of your Beamer document.

**metropolis** uses the Make build system to offer the following installation options for advanced users:

make sty builds the theme style files.

make doc builds this documentation manual.

make demo builds a demo presentation to test the features of metropolis.

make all builds the theme, manual, and demo presentation.

make clean removes the files generated by make all.

make install installs the theme into your local texmf folder.

make uninstall removes the theme from your local texmf folder.

make ctan creates a package for CTAN distribution.

# 2.2 Installing the Debian Package

As an alternative users of Debian or Ubuntu can also install this .deb package containing the theme files as well as the Fira Sans font files.

# 2.3 A Minimal Example

The following code shows a minimal example of a Beamer presentation using **metropolis**.

#### 2.4 Dependencies

- XeLaTeX
- Fira Sans and Mono font
- TikZ

The Fira Sans font is not a hard dependency. **metropolis** will try to load the font and use it if it is installed, but if not it will just use the standard font.

Depending on the Linux distribution, the packaged name of Fira Sans might be Fira Sans OT instead of Fira Sans. metropolis will check for this name too.

#### 2.5 Pandoc

To use this theme with Pandoc-based presentations, you can run the following command

```
$ pandoc -t beamer --latex-engine=xelatex -V theme:m -o
   output.pdf input.md
```

# 3 Customization

# 3.1 Package options

The theme provides a number of options. The options use a key=value interface. So every option is controlled by a key its value. To use an option you can either provide a comma separated list of options when invoking MTHEME in the preamble of the presentation.

```
\usetheme[<key=value list>]{m}
```

Or you can set them at any time with the \metroset macro.

```
\metroset {<key=value list>}
```

To set an option on a specific sub-package only you have to add the corresponding prefix (inner, outer, color), e.g.

```
\metroset{inner/block=fill}
```

The list of options is structured as shown in the following example.

key list of possible values . . . . . . . . . . . . . . . . default value

A short description of the option.

Although the options are grouped into the corresponding packages every option can and in most cases should be set on the main theme directly. If an option is listed in multiple sub-packages, setting it on the main theme will set the option on every sub-package accordingly.

#### 3.1.1 Main theme

everytitleformat	regular, lowercase, uppercase lowercase
	Shortcut option to change the case style of all titles together.
plaintitleformat	regular, lowercase, uppercase lowercase
	Control the case style of the plain title.
	3.1.2 Inner theme
block	transparent, fill transparent
	This option controls the block background. It can either be filled with a light grey or be transparent.
sectionpage	none, simple, progressbar progressbar
	Disable section pages at all, typeset centered section title or add a thin progress bar below the centered section title.
titleformat	regular, lowercase, uppercase lowercase
	Control the case style of the title.
sectiontitleformat	regular, lowercase, uppercase lowercase
	Control the case style of the section title.
	3.1.3 Outer theme
numbering	none, counter, fraction counter
	In the bottom right corner of each frame the current frame number is displayed. This can be disabled or the total framenumber can be added additionally.

progressbar none, head, frametitle, foot.....none

Adds a progress bar to the top of each frame (head), the bottom of each frame (foot), or directly below each frame title (frametitle).

frametitleformat regular, lowercase, uppercase ..... lowercase

Control the case style of the frame title.

#### 3.1.4 Color theme

block transparent, fill ..... transparent

This option controls the block background. It can either be filled with a light grey or be transparent.

background  $dark,\ light\ldots$  light

This option defines whether the background shall be dark and the foreground be light or vice versa.

#### 3.2 Color Customization

The included **metropolis** color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- normal text (dark fg, light bg)
- alerted text (colored fg, should be visible against dark or light)
- example text (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\strut = \{fg = \dots, bg = \dots\}
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of **metropolis** specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }
\setbeamercolor{title separator}{ ... }
```

```
\setbeamercolor{progress bar in head/foot}{ ... }
\setbeamercolor{progress bar in section page}{ ... }
```

#### 3.3 Font Customization

The default font for **metropolis** is Fira. Yet this can be easily changed using the standard font selection commands of the fontspec package. So if you for example prefer the Ubuntu font family just add the following two commands after loading the **metropolis** theme.

```
\setsansfont{Ubuntu}
\setmonofont{Ubuntu Mono}
```

#### 3.4 Commands

The \plain{title=[]}{<body>} command sets a slide in plain dark colors which can be useful to focus attention on a single sentence or image.

# 3.5 Paul Tol's colors: a pgfplots theme

A good presentation uses colors that are

- distinct from each other as much as possible, and
- distinct from black and white,
- under many different lighting and display environments, and
- to color-blind viewers,
- all while matching well together.

In a technical note for SRON, Paul Tol proposed a palette of colors satisfying these constraints. The sub-package pgfplotsthemetol defines palettes for pgfplots charts based on Tol's work. Use the mlineplot key to plot line data and mbarplot or horizontal mbarplot to plot bar charts.

# 4 Known Issues

The \plain command does not work if you override the METROPOLIS color theme with the default beamer color theme fly.

# 5 License

The theme itself is licensed under a Creative Commons Attribution-ShareAlike 4.0 International License. This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect the presentation that you create with the theme.

# 6 Implementation

# 6.1 metropolis main theme

The primary job of this package is to load the component sub-packages of the METROPOLIS theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

Load the required packages.

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{pgfopts}
```

#### 6.1.1 Options

\metroset First of all we define a macro for the user to set options.

```
3 \newcommand{\metroset}[1]{\pgfkeys{/metropolis/.cd,#1}}
```

Then we need to pass the unknown options to the sub-packages.

```
4 \pgfkeys{/metropolis/.cd,
5 .search also={
6 /metropolis/inner,
```

```
/metropolis/outer,
                          /metropolis/color,
                      },
                   We have to forwarded keys that affect multiple sub-packages manually.
                       block/.code=\pgfkeysalso{
                          inner/block=#1,
                   11
                          color/block=#1,
                   12
                   13 },
                   14 }
plaintitleformat Control the case style of the plain title
                   15 \pgfkeys{
                        /metropolis/plaintitleformat/.cd,
                   16
                          .is choice,
                   17
                         regular/.code=\renewcommand{\@metropolis@plaintitleformat}{#1},
                   18
                          lowercase/.code={%
                   19
                            \verb|\command{\@metropolis@plaintitleformat}{\MakeLowercase{\#1}}|
                   20
                   21
                         uppercase/.code={%
                   22
                            \renewcommand{\@metropolis@plaintitleformat}{\MakeUppercase{#1}}
                   23
                         },
                   ^{24}
                   25 }
everytitleformat
                   Control the case style of the every title
                   26 \pgfkeys{
                        /metropolis/everytitleformat/.code=\pgfkeysalso{
                   27
                            inner/titleformat=#1,
                   28
                            inner/sectiontitleformat=#1,
                   29
                   30
                            outer/frametitleformat=#1,
                            plaintitleformat=#1,
                   31
                          }
                   32
                   33 }
```

For backwards compatibility with earlier betas of the theme, we implement deprecated option names as aliases to the corresponding key=value options.

```
34 \pgfkeys{/metropolis/.cd,
```

```
usetitleprogressbar/.code=\pgfkeysalso{outer/progressbar=frametitle},
35
    noslidenumbers/.code=\pgfkeysalso{outer/numbering=none},
36
    use total slide indicator/.code \verb|\pgfkeysalso{outer/numbering=fraction}|,
37
    nosectionslide/.code=\pgfkeysalso{inner/sectionpage=none},
38
    darkcolors/.code=\pgfkeysalso{color/background=dark},
39
    blockbg/.code=\pgfkeysalso{color/block=fill, inner/block=fill},
41 }
Set default values for options.
42 \newcommand{\@metropolis@setdefaults}{
    \pgfkeys{/metropolis/.cd,
      plaintitleformat=lowercase,
44
   }
45
46 }
```

#### 6.1.2 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```
47 \useinnertheme{metropolis}
48 \useoutertheme{metropolis}
49 \usecolortheme{metropolis}
50 \usefonttheme{metropolis}

The tol theme for pgfplots is only loaded if pgfplots is used.
51 \AtEndPreamble{%
52 \@ifpackageloaded{pgfplots}{%
53 \RequirePackage{pgfplotsthemetol}
54 }{}
```

#### 6.1.3 Custom commands

55 }

We define custom commands in this package as their proper usage may depend on multiple sub-packages.

\@metropolis@plaintitleformat Define a hook to change the case format of the plain title.

```
56 \def\@metropolis@plaintitleformat#1{#1}
```

\plain Creates a plain frame with dark background, suitable for displaying images or a few words.

```
57 \newcommand{\plain}[2][]{%
    \begingroup
58
      \setbeamercolor{background canvas}{
59
        use=palette primary,
60
        parent=palette primary
61
62
      }
      \begin{frame}[c]{#1}
63
        \begin{center}
64
           \usebeamercolor[fg]{palette primary}
65
          \usebeamerfont{section title}
66
          \@metropolis@plaintitleformat{#2}
67
        \end{center}
68
      \end{frame}
69
    \endgroup
70
71 }
```

#### \mreducelistspacing

 $72 \newcommand{\mreducelistspacing}{\vspace{-\topsep}}$ 

Process package options

```
73 \@metropolis@setdefaults
74 \ProcessPgfOptions{/metropolis}
```

# 6.2 metropolis inner theme

A beamer inner theme dictates the style of the frame elements traditionally set in the "body" of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

```
Load required packages.
```

```
75 \RequirePackage{etoolbox}
76 \RequirePackage{calc}
77 \RequirePackage{pgfopts}
```

78 \RequirePackage{tikz}

#### 6.2.1 Options

block This option controls the block style.

```
79 \pgfkeys{
80  /metropolis/inner/block/.cd,
81    .is choice,
82    transparent/.code=\setlength{\@metropolis@blockskip}{0ex},
83    fill/.code=\setlength{\@metropolis@blockskip}{1ex},
84 }
```

titleformat Control the case style of the title

```
85 \pgfkeys{
    /metropolis/inner/titleformat/.cd,
87
      .is choice,
      regular/.code=\renewcommand{\@metropolis@titleformat}{},
88
      lowercase/.code={%
89
        \renewcommand{\@metropolis@titleformat}{\MakeLowercase}
90
      },
91
      uppercase/.code={%
92
93
        \renewcommand{\@metropolis@titleformat}{\MakeUppercase}
      },
94
95 }
```

sectiontitleformat Control the case style of the section title

```
96 \pgfkeys{
97  /metropolis/inner/sectiontitleformat/.cd,
98   .is choice,
99   regular/.code=\renewcommand{\@metropolis@sectiontitleformat}{},
100   lowercase/.code={%
101   \renewcommand{\@metropolis@sectiontitleformat}{\MakeLowercase}}
102  },
```

```
103
       uppercase/.code={%
104
         \renewcommand{\@metropolis@sectiontitleformat}{\MakeUppercase}
       },
105
106 }
```

The sectionpage option defines the behaviour of the sectionpage.

```
107 \pgfkeys{
     /metropolis/inner/sectionpage/.cd,
108
109
       .is choice,
       none/.code=\@metropolis@sectionpage@none,
110
       simple/.code=\@metropolis@sectionpage@simple,
111
       progressbar/.code=\@metropolis@sectionpage@progressbar,
112
113 }
```

\@metropolis@inner@setdefaults Set default values for inner theme options.

```
114 \newcommand{\@metropolis@inner@setdefaults}{
     \pgfkeys{/metropolis/inner/.cd,
116
       sectionpage=progressbar,
       block=transparent,
117
       titleformat=lowercase.
118
       sectiontitleformat=lowercase,
119
    }
120
121 }
```

#### 6.2.2Title page

\@metropolis@titleformat

Define hooks to change the case format of the titles.

```
122 \def\@metropolis@titleformat#1{#1}
123 \def\@metropolis@sectiontitleformat#1{#1}
```

To make the \MakeLowercase and \MakeUppercase macros work in the sectiontitle we have to patch \sectionentry and \beamer@section. This solution was suggested by Enrico Gregorio in an answer to this StackExchange question.

```
124 \patchcmd{\sectionentry}
    {\def\insertsectionhead{#2}}
125
    {\def\insertsectionhead{\@metropolis@sectiontitleformat{#2}}}
126
    {}
127
```

```
{\PackageError{beamerinnerthememetropolis}{Patching section title failed.}}

| 129 \patchcmd{\beamer@section} |
| 130 {\def\insertsectionhead{\hyperlink{Navigation\the\c@page}{\#1}}} |
| 131 {\def\insertsectionhead{\hyperlink{Navigation\the\c@page}{\@metropolis@sectiontitleformat{#1}}} |
| 132 {\PackageError{beamerinnerthememetropolis}{Patching section title failed.}}
```

title page Template for the title page. Each element is only typset if it is defined by the user. If \subtitle is empty, for example, it won't leave a blank space on the title slide.

```
134 \setbeamertemplate{title page}{
135 \begin{minipage}[b][\paperheight]{\textwidth}
136 \ifx\inserttitlegraphic\@empty\else\usebeamertemplate*{title graphic}\fi
137 \vfill%
138 \ifx\inserttitle\@empty\else\usebeamertemplate*{title}\fi
139 \ifx\insertsubtitle\@empty\else\usebeamertemplate*{subtitle}\fi
140 \usebeamertemplate*{title separator}
```

Beamer's definition of \insertauthor is always nonempty, so we have to test another macro initialized by \author{...} to see if the user has defined an author. This solution was suggested by Enrico Gregorio in an answer to this Stack Exchange question.

```
141 \ifx\beamer@shortauthor\@empty\else\usebeamertemplate*{author}\fi
142 \ifx\insertdate\@empty\else\usebeamertemplate*{date}\fi
143 \ifx\insertinstitute\@empty\else\usebeamertemplate*{institute}\fi
144 \vfill
145 \vspace*{1mm}
146 \end{minipage}
147}
```

Normal people should use \maketitle or \titlepage instead of using the title page beamer template directly. Beamer already defines these macros, but we patch them here to make the title page [plain] by default, remove \@thanks, and ensure the title frame number doesn't count.

\maketitle Inserts the title frame, or causes the current frame to use the title page template.

\titlepage 

148 \def\maketitle{%

149 \ifbeamer@inframe

```
150
                          \titlepage
                 151
                       \else
                          \frame[plain]{\titlepage}
                 152
                       \fi
                 153
                 154 }
                 155 \def\titlepage{%
                       \usebeamertemplate{title page}
                 156
                 157 }
  title graphic Set the title graphic in a zero-height box, so it doesn't change the position of other
                  elements.
                 158 \verb|\setbeamertemplate{title graphic}{|} \{
                 159
                       \vbox to Opt {
                          \vspace*{2em}
                 160
                          \inserttitlegraphic%
                 161
                 162
                       }%
                 163
                       \nointerlineskip%
                 164 }
           title Set the title on the title page.
                 165 \verb|\setbeamertemplate{title}{f}
                       \raggedright%
                 166
                       \linespread{1.0}%
                 167
                       \@metropolis@titleformat{\inserttitle}%
                 168
                       \par%
                 169
                       \vspace*{0.5em}
                 170
                 171 }
       subtitle Set the subtitle on the title page.
                 172 \setbeamertemplate{subtitle}{
                       \insertsubtitle%
                       \par%
                 174

237
238 }
```

progress bar in section page Template for the progress bar displayed by default on the section page. This code is duplicated in large part in the outer theme's template progress bar in head/foot.

 $239 \verb| lnewlength{metropolis@progressonsectionpage}|$ 

```
240 \setbeamertemplate{progress bar in section page}{
     \setlength{\metropolis@progressonsectionpage}{%
241
      \textwidth * \ratio{\insertframenumber pt}{\inserttotalframenumber pt}%
242
     }%
243
244
     \begin{tikzpicture}
       \draw[bg, fill=bg] (0,0) rectangle (\textwidth, 0.4pt);
245
     \draw[fg, fill=fg] (0,0) rectangle (\metropolis@progressonsectionpage, 0.4pt);
246
     \end{tikzpicture}%
247
248 }
```

The above code assumes that \insertframenumber is less than or equal to \inserttotalframenumber. However, this is not true on the first compile; in the absence of an .aux file, \inserttotalframenumber defaults to 1. This behaviour could cause fatal errors for long presentations, as \metropolis@progressonsectionpage would exceed TeX's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for \inserttotalframenumber; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems to solve.

249 \def\inserttotalframenumber{100}

By default, Beamer frames offer the c option to *almost* vertically center the text, but the placement is a little too high. To fix this, we redefine the c option to equalize \beamer@frametopskip and \beamer@framebottomskip. This solution was suggested by Enrico Gregorio in an answer to this Stack Exchange question.

```
324 \define@key{beamerframe}{c}[true]{% centered
325 \beamer@frametopskip=0pt plus 1fill\relax%
326 \beamer@framebottomskip=0pt plus 1fill\relax%
```

```
327 \beamer@frametopskipautobreak=Opt plus .4\paperheight\relax%
328 \beamer@framebottomskipautobreak=Opt plus .6\paperheight\relax%
329 \def\beamer@initfirstlineunskip{}%
330 }

Process package options

389 }
```

#### 6.3.2 Head and footline

All good beamer presentations should already remove the navigation symbols, but METROPOLIS removes them automatically (just in case).

```
390 \setbeamertemplate{navigation symbols}{}
```

Templates for the frame number. Can be omitted, shown or displayed as a fraction of the total frames.

```
391 \defbeamertemplate{frame numbering}{none}{}
392 \defbeamertemplate{frame numbering}{counter}{\insertframenumber}
393 \defbeamertemplate{frame numbering}{fraction}{
     \insertframenumber/\inserttotalframenumber
395 }
396 \defbeamertemplate{headline}{plain}{}
397 \defbeamertemplate{footline}{plain}{%
     \begin{beamercolorbox}[wd=\textwidth, sep=3ex]{footline}%
398
399
       \hfill%
       \usebeamerfont{page number in head/foot}%
400
       \usebeamertemplate*{frame numbering}
401
     \end{beamercolorbox}%
402
403 }
```

#### 6.3.3 Frametitle

\@metropolis@frametitleformat

Define a hook to change the case format of the frame title.

```
404 \ensuremath{\mbox{\sc def}\mbox{\sc def}} 1414
```

To make the \MakeLowercase and \MakeUppercase macros work in the frame title we have to patch \beamer@@frametitle. This solution was suggested by Enrico Gregorio in an answer to this StackExchange question.

```
\gdef\insertframetitle{{#2\ifnum\beamer@autobreakcount>0\relax{}\space\usebeamertemplate*{f
                           407

445 \RequirePackage{ifluatex}
```

#### 6.4.1 Load Fira font

If the presentation is compiled with XeLaTeX or LuaLaTeX the fontspec package will be loaded.

```
446 \ifboolexpr{bool {xetex} or bool {luatex}}{
447 \RequirePackage[no-math]{fontspec}
448 \defaultfontfeatures{Mapping=tex-text}
```

To simplify the check whether the Fira fonts are installed, a set macros is defined.

\checkfont Checks if a font is installed and increases fontsnotfound counter if not.

```
\newcounter{fontsnotfound}
449
     \newcommand{\checkfont}[1]{%
450
       \suppressfontnotfounderror=1%
451
       \int \int dx = "#1" at 10pt
452
       \ifx\x\nullfont%
453
         \stepcounter{fontsnotfound}%
454
456
       \suppressfontnotfounderror=0%
     }
457
458
```

\iffontexists Resets the fontsnotfound counter and calls \checkfont for each font in the comma separated list in the first argument.

```
\newcommand{\iffontsexist}[3]{%
459
        \setcounter{fontsnotfound}{0}%
460
       \expandafter\forcsvlist\expandafter%
461
       \checkfont\expandafter{#1}%
462
463
       \ifnum\value{fontsnotfound}=0%
          #2%
464
       \else%
465
          #3%
466
       \fi%
467
     }
468
```

Using the previously defined macros it is tried to load the Fira fonts. First the default Fira name will be tried. Second the Fira fonts with the suffix OT – used by some Linux distributions – will be tried. If this also fails a warning will be displayed and the standard fonts will be used.

```
469
     \iffontsexist{Fira Sans Light,%
                    Fira Sans Light Italic,%
470
471

# 6.5 metropolis color theme

Load required packages.

535 \RequirePackage{pgfopts}

#### 6.5.1 Options

block This option controls whether the blocks are filled or transparent.

```
536 \pgfkeys{
537  /metropolis/color/block/.cd,
538    .is choice,
539    transparent/.code=\@metropolis@block@transparent,
540    fill/.code=\@metropolis@block@fill,
541}
```

colors Defines whether the background shall be dark and the foreground be light or vice versa

```
542 \pgfkeys{
543  /metropolis/color/background/.cd,
544    .is choice,
545    dark/.code=\@metropolis@colors@dark,
546    light/.code=\@metropolis@colors@light,
547 }
```

\@metropolis@color@setdefaults Set default values for color theme options.

```
548 \newcommand{\@metropolis@color@setdefaults}{
549 \pgfkeys{/metropolis/color/.cd,
550 background=light,
```

```
551 block=transparent,
552 }
553 }
```

#### 6.5.2 Base colors

```
554 \definecolor{mDarkBrown}{HTML}{604c38}
555 \definecolor{mDarkTeal}{HTML}{23373b}
556 \definecolor{mLightBrown}{HTML}{EB811B}
557 \definecolor{mLightGreen}{HTML}{14B03D}
```

#### 6.5.3 Base styles

All colors in the METROPOLIS theme are derived from the definitions of normal text, alerted text, and example text.

```
558 \newcommand{\@metropolis@colors@dark}{
     \setbeamercolor{normal text}{%
559
560
       fg=black!2,
561
       bg=mDarkTeal
    }
562
563 }
564 \newcommand{\@metropolis@colors@light}{
     \setbeamercolor{normal text}{%
565
       fg=mDarkTeal,
566
       bg=black!2
567
    }
568
569 }
570 \setbeamercolor{alerted text}{%
     fg=mLightBrown
571
572 }
573 \space{2mm} text}{\%}
     fg=mLightGreen
574
575 }
```

#### 6.5.4 Derived colors

The titles and structural elements (e.g. itemize bullets) are set in the same color as normal text. This would ideally done by setting normal text as a parent

style, which we do to set titlelike, but this doesn't work for structure as its foreground is set explicitly in beamercolorthemedefault.sty.

```
576 \setbeamercolor{titlelike}{use=normal text, parent=normal text}
577 \setbeamercolor{author}{use=normal text, parent=normal text}
578 \setbeamercolor{date}{use=normal text, parent=normal text}
579 \setbeamercolor{institute}{use=normal text, parent=normal text}
580 \setbeamercolor{structure}{use=normal text, fg=normal text.fg}
```

The "primary" palette should be used for the most important navigational elements, and possibly of other elements. The METROPOLIS theme uses it for frame titles and slides.

```
581 \setbeamercolor{palette primary}{%
582    use=normal text,
583    fg=normal text.bg,
584    bg=normal text.fg
585 }
586 \setbeamercolor{frametitle}{%
587    use=palette primary,
588    parent=palette primary
589 }
```

The METROPOLIS inner or outer themes optionally display progress bars in various locations. Their color is set by progress bar but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with title separator.

```
590 \setbeamercolor{progress bar}{%
591
     use=alerted text,
     fg=alerted text.fg,
592
593
     bg=normal text.bg!50!normal text.fg
594 }
595 \setbeamercolor{title separator}{
     use=progress bar,
596
     parent=progress bar
597
598 }
599 \setbeamercolor{progress bar in head/foot}{%
     use=progress bar,
601
     parent=progress bar
602 }
```

```
603 \setbeamercolor{progress bar in section page}{
604
    use=progress bar,
     parent=progress bar
605
606 }
Blocks
607 \newcommand{\@metropolis@block@transparent}{
     \setbeamercolor{block title}{use=normal text, parent=normal text}
608
609 }
610 \newcommand{\@metropolis@block@fill}{
     \setbeamercolor{block title}{%
612
       use=normal text,
       fg=normal text.fg,

# 6.6 Tol pgfplots theme

Paul Tol's 12-color palette<sup>1</sup> is as follows:

```
638 \definecolor{TolDarkPurple}{HTML}{332288}
639 \definecolor{TolDarkBlue}{HTML}{6699CC}
640 \definecolor{TolLightBlue}{HTML}{88CCEE}
641 \definecolor{TolLightGreen}{HTML}{44AA99}
642 \definecolor{TolDarkGreen}{HTML}{117733}
643 \definecolor{TolDarkBrown}{HTML}{999933}
644 \definecolor{TolDarkBrown}{HTML}{DDCC77}
645 \definecolor{TolDarkRed}{HTML}{661100}
646 \definecolor{TolDarkRed}{HTML}{CC6677}
647 \definecolor{TolLightPink}{HTML}{AA4466}
648 \definecolor{TolDarkPink}{HTML}{882255}
649 \definecolor{TolLightPurple}{HTML}{AA44499}
```

To use these colors, we describe "cycle lists" from which PGF chooses styles for the different series in a chart.

mbarplot cycle Colors and styles intended for bar charts with up to 12 series.

```
650 \pgfplotscreateplotcyclelist{mbarplot cycle}{%
                            fill=TolDarkBlue!70},
     {draw=TolDarkBlue,
651
652
     {draw=TolLightBrown,
                            fill=TolLightBrown!70},
     {draw=TolLightGreen,
                            fill=TolLightGreen!70},
653
     {draw=TolDarkPink,
                            fill=TolDarkPink!70},
654
     {draw=TolDarkPurple,
                            fill=TolDarkPurple!70},
655
     {draw=TolDarkRed,
                            fill=TolDarkRed!70},
656
     {draw=TolDarkBrown,
                            fill=TolDarkBrown!70},
657
658
     {draw=TolLightRed,
                            fill=TolLightRed!70},
                            fill=TolLightPink!70},
     {draw=TolLightPink,
659
     {draw=TolLightPurple, fill=TolLightPurple!70},
660
661
     {draw=TolLightBlue,
                            fill=TolLightBlue!70},
```

 $<sup>^1</sup>$ Tol actually describes several palettes; these colours are taken from the bottom row of Figure 3 in his technical note.

```
662 {draw=TolDarkGreen, fill=TolDarkGreen!70},
663 }
```

mlineplot cycle Colors and styles intended for line charts with up to 4 series.

```
664 \pgfplotscreateplotcyclelist{mlineplot cycle}{%
665 {TolDarkBlue, mark=*, mark size=1.5pt},
666 {TolLightBrown, mark=square*, mark size=1.3pt},
667 {TolLightGreen, mark=triangle*, mark size=1.5pt},
668 {TolDarkBrown, mark=diamond*, mark size=1.5pt},
669}
```

However, the above cycle lists are not applied automatically. We still need to define styles — mlineplot and mbarplot — that the user can apply to the axis of a pgfplots chart to use the colors. We'll also take the opportunity to adjust the display of chart axes when these styles are used.

```
670 \pgfplotsset{
671 compat=1.9,
```

mlineplot A style to apply to the axis of a PGF line plot.

```
mlineplot/.style={
672
673
       mbaseplot,
       xmajorgrids=true,
674
       ymajorgrids=true,
675
       major grid style={dotted},
676
677
       axis x line=bottom,
       axis y line=left,
678
679
       legend style={
          cells={anchor=west},
680
          draw=none
681
682
       },
683
       cycle list name=mlineplot cycle,
     },
684
```

mbarplot A style to apply to the axis of a PGF bar chart. mbarplot uses vertical bars horizontal mbarplot by default, while horizontal mbarplot has horizontal bars as the name implies. Their shared properties are factored out into the internal style mbarplot base.

```
685 mbarplot base/.style={
```

```
mbaseplot,
           686
           687
                  bar width=6pt,
                  axis y line*=none,
           688
                },
           689
                mbarplot/.style={
           690
                  mbarplot base,
           691
           692
                  ybar,
                  xmajorgrids=false,
           693
                  ymajorgrids=true,
           694
                  area legend,
           695
                  legend image code/.code={%
           696
                    \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
           697
                  },
           698
                  cycle list name=mbarplot cycle,
           699
           700
                },
                horizontal mbarplot/.style={
           701
                  mbarplot base,
           702
                  xmajorgrids=true,
           703
                  ymajorgrids=false,
           704
                  xbar stacked,
           705
                  area legend,
           706
                  legend image code/.code={%
           707
           708
                    \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
                  },
           709
          710
                  cycle list name=mbarplot cycle,
                },
           711
mbaseplot Adjusts the appearance of the axes in a PGF chart.
                mbaseplot/.style={
           712
                  legend style={
